

Wifihacker-geek: Ways to Hack a Wi-Fi Password

The Internet is considered as one of the best inventions of a human. It is very important in daily life and so people use this. In places, you will find Wi-Fi network but you can't use that because it's secured. Now there are many benefits of using a Wi-Fi connection for internet over any other ways. So in such situation, you may need to hack the Wi-Fi but don't know the processes. So here are some simple yet effective ways you can hack a Wi-Fi:

- **Point to remember:** before you start hacking or learn how to hack you must remember that hacking is not all ethical. You will not legal actions for hacking your neighbor's Wi-Fi password or the coffee shop's password. But until you are not using their personal files or credential data in any way, you are safe. If the person finds you using their personal data in any way they can put legal charges against you.
- **With the software process:** the first and the basic method to hack any Wi-Fi are to do this by the software method. In this way you will go to need these things:

Wireless adopter:

In the beginning, you will need a wireless adopter. This wireless adopter is one of the main things of this type of hacking. And this is the only thing you need to buy or invest in. make sure to buy a good wireless adopter that can support your Wi-Fi hacking software. This adopter must have the capacity to capture the encrypted codes via software.

Software:

You need to have the software to capture the codes in the adopter. And then you will need software to crack the Wi-Fi security keys. You can get the software for free from the own websites. After downloading follow their instructions to run the software on your device you want to use the Wi-Fi on. You can choose to download software to hack Wi-Fi from reputed sites like <http://www.wifihacker-geek.com>.

Need to have patience:

After knowing the techniques you must know the basic rules to hack Wi-Fi and that is to have patience. As the owner secured its Wi-Fi with a strong password and in strongly encrypted codes, so this will not be that easy to hack. But you must keep patience while performing hacking. Hacking needs patience. Even after following the software steps you will need to wait for some time to let it done its work.

Follow online tutorials:

If you still don't find yourself confident enough then you can choose to see online tutorials to hack Wi-Fi password in this way. It's better to learn properly and then try rather than trying it all wrong.
